

## Dr Sam Harrison

---

Contact Address:	UK Centre for Ecology & Hydrology, Lancaster, LA1 4AP
Profession / Specialisation:	Computational Sciences
Job Title:	Environmental Modeller

---

### Professional and Educational Qualifications

PhD (Quantum Nanotechnology)	Department of Physics, Lancaster University	2016
MPhys (Physics)	Department of Physics, Lancaster University	2012

---

### Summary of Professional Expertise

Dr Harrison is an environmental modeller with a background in quantum physics, specialising in the development of models for the fate, exposure and biouptake of chemicals in the natural environment, with broader interests in the use of integrated modelling and data science to better quantify the impacts of environmental change. He is an Early Career Fellow on NERC's Constructing a Digital Environment Expert Network, and Fellow of the Software Sustainability Institute. His work frequently involves assessing the relevance of models to regulator and stakeholders, giving him good insights into model regulatory needs and other end-user requirements. He is skilled in the creation of graphical user interfaces and data visualisations, and has worked part-time as a freelance application developer for a number of years.

---

### Employment History

2017 - Present Environmental Modeller at UK Centre for Ecology & Hydrology, Lancaster

### Research Projects and Funding

2022 - 2026	ETERNAL: Boosting the reduction of the environmental impact of pharmaceutical products throughout their entire life cycle. <i>Institutional PI</i> , coordinator AIMPLAS, Spain. Environmental exposure, fate and risk assessment of pharmaceuticals in the environment to aid the production of green pharmaceuticals. <i>European Commission Horizon Europe</i> .
2022 - 2023	2022 Fellow of the Software Sustainability Institute. Developing a web-based interface to help researchers make their software reproducible.
2021 - 2023	FRAGMENT-MNP: Developing a mechanistic model of Micro and NanoPlastic FRAGMENTation in the ENVIRONMENT. <i>PI</i> of international consortium (Europe and US) to develop a model of plastic fragmentation and provide parameterisation and validation via targeted laboratory and field studies of chemical, mechanical and biological stressors contributing to fragmentation. <i>European Chemical Industry Council (Cefic)</i> .
2021 - 2023	UTOPIA: Development of a multimedia unit world open-source model for microplastic. <i>Institutional PI</i> , coordinator Stockholm University. <i>Cefic</i> .
2021 - 2022	Early Career Fellow on NERC's Constructing a Digital Environmental Expert Network.
2020 - 2024	SABYNA: Simple, robust and cost-effective approaches to guide industry in the development of safer nanomaterials and nano-enabled products. Development of a Guidance Platform to support safe-by-design nanomaterial development, including integration of multiple exposure and hazard models. Leading environmental exposure aspects. <i>European Commission Horizon 2020 (H2020)</i> .
2020 - 2024	ASINA: Anticipating Safety Issues at the Design Stage of Nano Product Development. Technical guidance on safe-by-design nanomaterial design, production and use. Leading environmental exposure modelling work. <i>H2020</i> .

2019 - 2023	NanoSolveIT: Innovative Nanoinformatics models and tools: towards a Solid, verified and Integrated Approach to Predictive (eco)Toxicology. Contributing to integration of chained models into a cloud-based nanosafety decision support tool. <i>H2020</i> .
2018 - 2023	UKSCaPE SPEED. Development of a model for long-term spatiotemporal prediction of metal concentrations in topsoils for the UK. Production of historic, current and future metal pollution risk and impact maps. Future projections based on projected change in emissions/additions due to climate, land use and socioeconomic factors. <i>NERC</i> .
2018	Scoping Chemical Exposure Models. Review of stakeholder needs in environmental chemical exposure modelling, developing recommendations for model development to meet user needs. <i>Defra</i> .
2017 - 2019	NanoFASE: Nanomaterial FAte and Speciation in the Environment. Development of a spatiotemporal model for prediction of engineered nanomaterial fate in soils, surface waters and sediments (lead programmer). Application of the model to scenarios of nanomaterial release and prediction of fate and biouptake in the environment. <i>H2020</i> .
2016 - 2019	caLIBRATE: Performance testing, calibration and implementation of a next generation system-of-systems Risk Governance Framework for nanomaterials. Comparison and validation of nanomaterial exposure models for incorporation into nano-risk governance framework. <i>H2020</i> .

## Memberships

- Society of Environmental Toxicology and Chemistry (SETAC)
- Centre of Excellence in Environmental Data Science (CEEDS)
- Community Surface Dynamics Modeling System (CSDMS)
